

EMC are renowned for their enterprise applications, both hardware and software. They are one of the world's leaders in systems and software that allow you to leverage one of your most strategic assets; your business data. Taken as a whole, EMC's applications allow you to build a computing infrastructure to meet your every changing business needs for security, storage, virtualisation and more.

EMC Replistor

RepliStor is an easy to use, out-of-the-box software technology for data recovery and protection. It delivers a simple and reliable asynchronous replication capability for Windows that geographically distributes identical sets of data instantly to one or many computers. RepliStor increases the availability of your data by delivering real-time replicas to one or many locations, regardless of location. Your data can be used for off-line backup protection, disaster recovery, data distribution, and application testing.

RepliStor provides real time data replication and increases the availability and reliability of Windows servers without the use of proprietary or specialized hardware. RepliStor software operates over both local area network (LAN) and wide area network (WAN) connections, and allows remote administration and installation. RepliStor software also operates across Windows domains; you can administer RepliStor software across domains from any RepliStor client in the network.

EMC Retrospect for Windows

delivers powerful yet easy-to-use data protection for your servers, 24x7 applications, desktops, and notebooks. It protects your business from data loss due to user error, computer failure, or site-wide disasters. Retrospect protects millions of computers world-wide and consistently earns top awards and broad industry acclaim for its unique patented technology.

Robust data protection doesn't have to be complex. Retrospect's intuitive wizards get you up and running quickly. Backup operations are automatically adjusted to ensure that all computers are protected without requiring manual intervention. With Retrospect there is no need to write new backup scripts each day to keep backups running smoothly. And user-initiated restores enable end users to perform fast onsite recovery of their data without putting a strain on IT resources.

EMC Retrospect for Mac

provides small and midsize businesses with the reliability, ease of use, power, and flexibility they need to protect critical data on their Macs and Windows PCs. EMC Retrospect includes a state-of-the-art Mac user interface and enterprise-level features—including remote management of one or more backup servers and disk-to-disk-to-tape backups— at a fraction of the cost of other products. With more than two decades of field-tested expertise and millions of users worldwide, EMC Retrospect is the most trusted name in Mac backup.

EMC Retrospect provides Mac users with an easy-to-use application that automates the backup process for networked computers in small office/home offices, small and midsize businesses, branch offices, and departments in large organizations.
