

EMC® Retrospect® 8 for Macintosh

Data Protection for Small and Medium Business & Home Networks

EMC Retrospect 8 backup and recovery software for the Mac provides small and midsize businesses with the reliability, ease of use, power, and flexibility they need to protect critical data on their Macs and Windows PCs. EMC Retrospect includes a state-of-the-art Mac user interface and enterprise-level features—including remote management of one or more backup servers and disk-to-disk-to-tape backups—at a fraction of the cost of other products. With more than two decades of field-tested expertise and millions of users worldwide, EMC Retrospect is the most trusted name in Mac backup.

Easy and Automatic

EMC Retrospect provides Mac users with an easy-to-use application that automates the backup process for networked computers in small office/home offices, small and midsize businesses, branch offices, and departments in large organizations.

- Retrospect is simple to use.
- Makes a complete and reliable backup strategy easy.
- Works in a mixed Macintosh/Windows environment.

Powerful and Flexible

EMC Retrospect provides enterprise-level features and performance that small and midsize businesses need, without requiring dedicated IT staff to manage backup and recovery.

- Retrospect is packed with features that business and network users require for protecting critical data.
- Media management benefits make media rotation easy.

Reliable and Secure

With more than two decades of proven reliability for millions of users, EMC Retrospect is the backup software that small and midsize businesses trust to protect their valuable information against costly data loss.

- Retrospect saves a complete point-in-time file listing with every backup, and then verifies the data copied during the backup process—ensuring an accurate restore every time.
- Government-certified encryption means backups are always secure.

Retrospect 8 Multi Server

Designed for small and midsize businesses and branch offices, and departments in large organizations protecting more than one server, Retrospect Multi Server runs on a Mac OS X or Mac OS X server computer and provides licenses to protect an unlimited number of networked Mac, Windows, and Linux servers, desktops, and notebooks.

Retrospect 8 Single Server

Designed for small and midsize businesses, branch offices, and departments in large organizations protecting one server, Retrospect Single Server runs on a Mac OS X or Mac OS X server and protects networked Mac, Windows, and Linux desktops and notebooks. A server client license can be purchased to protect an additional networked Mac, Windows, or Linux server.

Retrospect 8 Desktop 3 User

Designed for individual users, home offices and small offices, Retrospect Desktop 3-User protects a single Mac desktop or notebook, or a small network of Mac, Windows, and Linux desktops and notebooks.

EMC Retrospect 8 New Features

All-new, customizable user interface	The all-new Retrospect 8 user interface is laid out similarly to iTunes and Apple's Server Admin tool, making it immediately familiar and easy to navigate.
Powerful new engine	Retrospect 8 performs up to eight simultaneous backup, restore, and copy operations.
Backup-to-disk features	Includes support for local and network hard disks, combining multiple volumes into a single destination, adjustable storage usage limitations, and disk grooming to remove out-of-date backup data and free up space.
True disk-based backup staging	Archive critical point-in-time backups to portable media or tape at your convenience
Simultaneous streaming of data	Retrospect 8 streams data to multiple disk or tape storage systems at the same time.
Improved tape library management	Barcode tracking and automatic tape drive cleaning make tape library management easy.
Custom reporting	Powerful reporting, including sources not backed up in n days, available/used media set capacity, performance data, and much more, keeps you informed and in control.
Better email notification	Notifies you of completed operations, media requests, and warnings.
Backup Data Encryption	Government certified AES-256 encryption of backup data offers added security.
Advanced network client support	Supports multiple network interfaces and reduces overall energy consumption with wake-on-LAN feature that wakes sleeping computers for backup.
Backs up Windows Server 2003/2008 and Windows XP/Vista clients	Includes those running within VMware Fusion and Parallels, with system state preservation and backup of open files.
