

PeerSync PSObserver, Version 2.0.1

To upgrade, double-click on the installation file (obs20.exe) in the Explorer window, or choose "Run" from the Start Menu and then select the application.

If you are upgrading the current version of PSObserver (2.0.0 to 2.0.1) simply install the application over your existing PSObserver and the previous version will be backed up in a sub-folder called 'BACKUP' (if the option to keep a backup is selected during the installation).

If you are evaluating a new version of Observer 2.0 and you already have an existing copy of Observer 1.0 or older, please select a new directory during the installation.

Note: For more information on the latest features and how to implement specific scenarios please go to: <http://www.peersoftware.com/support/peerutilities.aspx>

New Features	
ID	DESCRIPTION
NA	The installation and executable are now Windows Vista and Server 2008 UAC compliant
Fixes/Enhancements	
ID	DESCRIPTION
NA	Fixed an issue where the Observer failed to receive status information from PeerLock. This issue occurred when the file paths were too long causing the mail slot message size from PeerLock to accede the 424 byte limit.
NA	Fixed an issue where the Observer failed to populate the Domain List. This issue occurred only when the Observer was built with the new compiler.
NA	Fixed a minor interface issue that caused the table columns to word wrap. This issue would only occur when the "View"- "Use Skins" option was enabled and the Observer was built using the new Compiler.
