

PeerSync PSObserver, Version 3.0.1

To upgrade, double-click on the installation file (obs20.exe) in the Explorer window, or choose "Run" from the Start Menu and then select the application.

If you are upgrading the current version of PSObserver (2.0.2 to 3.0.1) simply install the application over your existing PSObserver and the previous version will be backed up in a sub-folder called 'BACKUP' (if the option to keep a backup is selected during the installation).

If you are evaluating a new version of Observer 3.0 and you already have an existing copy of Observer 2.0 or older, please select a new directory during the installation.

Note: For more information on the latest features and how to implement specific scenarios please go to: <http://www.peersoftware.com/support/peerutilities.aspx>

Introducing the [PeerSync Administrator Enterprise Edition Package](#)

ID	DESCRIPTION
1.	E-Mail Alerts: Receive e-mail notifications when the status of a running PeerSync instance changes to Failed, Finished, Failed-Idle, Pending, Paused, or Receiving. Available only with the PeerSync Administrator Enterprise Package .
2.	Start the PeerSync Service on a selected computer: Select or enter the name of a computer on which to start the PeerSync service. This requires that the PeerSync service is already installed and configured. Available only with the PeerSync Administrator Enterprise Package .
3.	Start PeerSync Service: Provides the ability to start a stopped PeerSync service of a selected item from the PeerSync Activity Panel. Available only with the PeerSync Administrator Enterprise Package .
4.	Stop PeerSync Service: Provides the ability to stop the PeerSync service of a selected item from the PeerSync Activity Panel. Available only with the PeerSync Administrator Enterprise Package .
5.	Pause PeerSync Service: Provides the ability to pause the PeerSync service of a selected item from the PeerSync Activity Panel. Available only with the PeerSync Administrator Enterprise Package .
6.	Resume PeerSync Service: Provides the ability to resume a paused PeerSync service of a selected item from the PeerSync Activity Panel. Available only with the PeerSync Administrator Enterprise Package .
7.	View or Edit a PeerSync Profiles: Downloads a remote Profile to the local system for viewing and editing. Changes can be later distributed to remote computers. A light version of the PeerSync Profiler called the Profile Editor can be used to make Profile modifications. Available only with the PeerSync Administrator Enterprise Package .
8.	Create Custom PeerSync Profiles: Provides the ability to create new Profiles that can be later distributed to remote computers. A light version of the PeerSync Profiler called

	the Profile Editor can be used to create new Profiles. Available only with the PeerSync Administrator Enterprise Package .
9.	Distribute Profiles: Transfer/distribute desired Profiles to one or more remote computers. Available only with the PeerSync Administrator Enterprise Package .
10.	Restart Profiles: Provides the ability to restart PeerSync Profiles that are running on remote computers. Available only with the PeerSync Administrator Enterprise Package .
11.	Process Failed Events: Issues a command to PeerSync to re-process any failed events/files that failed to be processed. This avoids having to a scan or restart PeerSync. Available only with the PeerSync Administrator Enterprise Package .
12.	Process Failed Scans: Issues a command to PeerSync to re-process any scans that failed to run/complete. This avoids having to restart PeerSync. Available only with the PeerSync Administrator Enterprise Package .
13.	Release PeerLock Locks: Release the target PeerLock lock handles of the desired files. This may cause the target files to be temporarily released. During the next Lock Cycle/Frequency/Interval PeerLock may detect that the source files are opened, and will re-lock the target files. Available only with the PeerSync Administrator Enterprise Package .
14.	Profile Editor: This light weight version of the PeerSync Profiler can be used to create and edit Profiles from the system where the Observer is running without having to install PeerSync. The Profile Editor must be registered using your PeerSync license key to ensure only authorized PeerSync Profiles are created/modified. Available only with the PeerSync Administrator Enterprise Package .

Fixes/Enhancements

ID	DESCRIPTION
NA	NEW! Added a new Save Defaults option in the File menu. When selected it will store out all interface settings, including position of windows, into the PSOBSDEF.CFG file. By default, interface changes would only be saved when the application closes.
NA	NEW! Added a License Information item under the Help menu. When selected, the Product Editions and Licensing dialog will open to show the current packages, options, and functionalities the Observer is registered to use.
NA	NEW! Re-categorized the View menu options to simplify selections.
NA	NEW! Added new View menu items under the Show Activity Panels category. It now allows to Show PeerSync , Show PeerLock , or Show Both panels.
NA	Resolved an issue where the Scan Selected Domain for Computers option was not working and would fail to populate the Domain List with all the computers running in the desired domain.
NA	Fixed an issue with the Set Transmit Frequency option for the PeerSync Activity Pop-up menu. The frequency change would impact both PeerSync and PeerLock frequency rates. The change will now apply to only the product that was intended.
