

Multiple Arguments Incorporation Proper Format

Goal: To understand the proper writing format for arguments to be included in the Pre/Post Process window.

This would be a useful feature if you need to use one or more arguments to launch processes before and/or after Job synchronization.

Multiple Arguments Examples

Format: cmd1 arg1A arg1B; cmd2 arg2A arg2B; cmd3 arg3A arg3B

Before:

```
SETBLACKOUT OPT1 0600:2300; LOGEMAIL "Job: %JobName% Started"
```

After:

```
UPDATETRIGGERFILE "\\<<$CompList1.txt$>>\C$\Testing\Data\GLBLCHG.000"; LOGEMAIL  
JOBSTATSUMMARY
```

Make sure you separate each argument by a **space and a semicolon**
