

**Goal:**

To generate a log file report with Job based synchronization summary information.

*This would be a useful feature if you wish to have a log report generated after every synchronization to inform you of the synchronization outcome (if successful or not).*

---

**The following are the different Options available for this particular Argument:**

**PARAM I- File Path**

**"C:\Program Files\PeerSync\%JobName%Report.log"**

*The above is the path of the log file to be generated.*

**PARAM II- JOBSTATSUMMARY**

*This Option will include the Job statistic summary in the log file or e-mail. Information would be included such as:*

*Number of files added, deleted, update. Individual files events will also be included.*

**- "String to print in body content"**

This would replace the JOBSTATSUMMARY with the content from the string.

---

**Use the following Format to setup a LOGENTRY**

**LOGENTRY "PATH" JOBSTATSUMMARY**

**OR**

**LOGENTRY "PATH" "String to Include in Body Content"**

*Examples:*

LOGENTRY "C:\LOGS\%DATE%\%JOBNAME%" JOBSTATSUMMARY

This entry will generate a **Log Report** to be written in the LOGS directory under a subfolder identified by the date. The log file name will be same as the Job name.

This log will include **Summary Information** of the specific Job synchronization.

LOGENTRY "C:\LOGS\%DATE%\%JOBNAME%" "Job has completed"

This entry will generate a **Log Report** to be written in the LOGS directory under a subfolder identified by the date. The log file name will be same as the Job name.

This log will include "**Job has completed**" in the body of the specific Job report.
